SMART TV Quick Setup Guide

**Wireless Network Connection**

- Press the SMART button to access the Home Menu. Select Settings and press [Network].
- Select the NETWORK menu. Select Network Connection.
- When an icon with a TV appears on the TV status window, the TV is connected to the network. If the TV fails to connect, check the network status window. If the network status window shows an AP or wireless network icon, press it.
- Check the password for the wireless network in the router settings window.
- If you are using a static IP, enter IP directly.
- Check the TV or the router. If the TV fails to connect, check the TV or the router.

**Wired Network Connection**

- Plug a LAN cable into the TV’s back panel and into your cable modem.
- When an icon with a TV appears on the TV status window, the TV is connected to the network. If the TV fails to connect, check the network status window or the Internet service provider. (The Internet service provider may also need to be registered with your router.)
- Check the router manufacturer’s website to make sure your router has the latest firmware version installed.
- Unplug the power cord of the AP, cable modem and gateway. Try to connect after 5 seconds.
- Initialize (Reset) the AP or cable modem. Then, re-establish the connection.
- Unplug the power cord of the AP, cable modem and gateway. Then, search your device again.
- Follow the instructions below that correlate to your device.

**Troubleshooting Network Problems**

1. Check if the SMART button is working correctly before using the TV.
2. Check the password for the wireless network in the router settings window.
3. If you are using a static IP, enter IP directly.
4. Check the TV or the router. If the TV fails to connect, check the TV or the router.

**Installing & Setting**

- When an icon with a TV appears on the TV status window, the TV is connected to the network. If the TV fails to connect, check the network status window or the Internet service provider. (The Internet service provider may also need to be registered with your router.)
- Check the router manufacturer’s website to make sure your router has the latest firmware version installed.
- Unplug the power cord of the AP, cable modem and gateway. Try to connect after 5 seconds.
- Initialize (Reset) the AP or cable modem. Then, re-establish the connection.
- Unplug the power cord of the AP, cable modem and gateway. Then, search your device again.
- Follow the instructions below that correlate to your device.
