RANGE SAFETY

Your safety and the safety of others are very important.

We have provided many important safety messages in this manual and on your appliance. Always read and obey all safety messages.

⚠️ DANGER

You can be killed or seriously injured if you don’t immediately follow instructions.

⚠️ WARNING

You can be killed or seriously injured if you don’t follow instructions.

All safety messages will tell you what the potential hazard is, tell you how to reduce the chance of injury, and tell you what can happen if the instructions are not followed.

The Anti-Tip Bracket

The range will not tip during normal use. However, the range can tip if you apply too much force or weight to the open door without the anti-tip bracket fastened down properly.

⚠️ WARNING

Tip Over Hazard

A child or adult can tip the range and be killed.

Verify the anti-tip bracket has been properly installed and engaged per installation instructions.

Re-engage anti-tip bracket if range is moved.

Do not operate range without anti-tip bracket installed and engaged.

Failure to follow these instructions can result in death or serious burns to children and adults.

To verify the anti-tip bracket is installed and engaged:

• Slide range forward.
• Look for the anti-tip bracket securely attached to floor or wall.
• Slide range back so rear range foot is under anti-tip bracket.
• See installation instructions for details.

State of California Proposition 65 Warnings:

WARNING: This product contains one or more chemicals known to the State of California to cause cancer.

WARNING: This product contains one or more chemicals known to the State of California to cause birth defects or other reproductive harm.
IMPORTANT SAFETY INSTRUCTIONS

WARNING: To reduce the risk of fire, electrical shock, injury to persons, or damage when using the range, follow basic precautions, including the following:

- **WARNING: TO REDUCE THE RISK OF TIPPING OF THE RANGE, THE RANGE MUST BE SECURED BY PROPERLY INSTALLED ANTI-TIP DEVICES. TO CHECK IF THE DEVICES ARE INSTALLED PROPERLY, SLIDE RANGE FORWARD, LOOK FOR ANTI-TIP BRACKET SECURELY ATTACHED TO FLOOR OR WALL, AND SLIDE RANGE BACK SO REAR RANGE FOOT IS UNDER ANTI-TIP BRACKET.**

- **CAUTION:** Do not store items of interest to children in cabinets above a range or on the backguard of a range – children climbing on the range to reach items could be seriously injured.

- Proper Installation – Be sure the range is properly installed and grounded by a qualified technician.

- Never Use the Range for Warming or Heating the Room.

- Do Not Leave Children Alone – Children should not be left alone or unattended in an area where the range is in use. They should never be allowed to sit or stand on any part of the range.

- Wear Proper Apparel – Loose-fitting or hanging garments should never be worn while using the range.

- User Servicing – Do not repair or replace any part of the range unless specifically recommended in the manual. All other servicing should be referred to a qualified technician.

- Storage in or on the Range – Flammable materials should not be stored in an oven or near surface units.

- Do Not Use Water on Grease Fires – Smother fire or flame or use dry chemical or foam-type extinguisher.

- Do Not Use Oven Cleaners – No commercial oven cleaner or other cleaning solution of any kind should be used in or around any part of the oven.

- Do Not Heat Unopened Food Containers – Build-up of pressure may cause container to burst and result in injury.

- Keep Oven Vent Ducts Unobstructed.

- Placement of Oven Racks – Always place oven racks in desired location while oven is cool. If rack must be moved while oven is hot, do not let potholder contact hot heating element in oven.

- **DO NOT TOUCH HEATING ELEMENTS OR INTERIOR SURFACES OF OVEN – Heating elements may be hot even though they are dark in color. Interior surfaces of an oven may become hot enough to cause burns. During and after use, do not touch, or let clothing or other flammable materials contact surface units or areas near units until they have had sufficient time to cool. Among those areas are the cooktop and surfaces facing the cooktop.

- Use Proper Pan Size – The range is equipped with one or more surface units of different size. Select utensils having flat bottoms large enough to cover the surface unit heating element. The use of undersized utensils will expose a portion of the heating element to direct contact and may result in ignition of clothing. Proper relationship of utensil to burner will also improve efficiency.

- Never Leave Surface Units Unattended at High Heat Settings – Boilover causes smoking and greasy spillovers that may ignite.

- Make Sure Reflector Pans or Drip Bowls Are in Place – Absence of these pans or bowls during cooking may subject wiring or components underneath to damage.

- Protective Liners – Do not use aluminum foil to line surface unit drip bowls or oven bottoms, except as suggested in the manual. Improper installation of these liners may result in a risk of electric shock, or fire.

- Glazed Cooking Utensils – Only certain types of glass, glass/ceramic, ceramic, earthenware, or other glazed utensils are suitable for range-top service without breaking due to the sudden change in temperature.

- Utensil Handles Should Be Turned Inward and Not Extend Over Adjacent Surface Units – To reduce the risk of burns, ignition of flammable materials, and spillage due to unintentional contact with the utensil, the handle of a utensil should be positioned so that it is turned inward, and does not extend over adjacent surface units.

- Do Not Soak Removable Heating Elements – Heating elements should never be immersed in water.

- Do Not Cook on Broken Cooktop – If cooktop should break, cleaning solutions and spillovers may penetrate the broken cooktop and create a risk of electric shock. Contact a qualified technician immediately.

- Clean Cooktop With Caution – If a wet sponge or cloth is used to wipe spills on a hot cooking area, be careful to avoid steam burn. Some cleaners can produce noxious fumes if applied to a hot surface.

- Use Care When Opening Door – Let hot air or steam escape before removing or replacing food.

- Do Not Heat Unopened Food Containers – Build-up of pressure may cause container to burst and result in injury.

- Keep Oven Vent Ducts Unobstructed.

- Placement of Oven Racks – Always place oven racks in desired location while oven is cool. If rack must be moved while oven is hot, do not let potholder contact hot heating element in oven.

- **DO NOT TOUCH HEATING ELEMENTS OR INTERIOR SURFACES OF OVEN – Heating elements may be hot even though they are dark in color. Interior surfaces of an oven become hot enough to cause burns. During and after use, do not touch, or let clothing or other flammable materials contact heating elements or interior surfaces of oven until they have had sufficient time to cool. Other surfaces of the appliance may become hot enough to cause burns – among these surfaces are oven vent openings and surfaces near these openings, oven doors, and windows of oven doors.

For self-cleaning ranges –

- Do Not Clean Door Gasket – The door gasket is essential for a good seal. Care should be taken not to rub, damage, or move the gasket.

- Do Not Use Oven Cleaners – No commercial oven cleaner or oven liner protective coating of any kind should be used in or around any part of the oven.

- Clean Only Parts Listed in Manual.

- Before Self-Cleaning the Oven – Remove broiler pan and other utensils.

For units with ventilating hood –

- Clean Ventilating Hoods Frequently – Grease should not be allowed to accumulate on hood or filter.

- When flambeing foods under the hood, turn the fan on.

### Keypad Feature Instructions

**DELAY START**  
**Delayed start**  
The Delay Start keypad is used to enter the starting time for an oven function with a delayed start. Delay Start should not be used for foods such as breads and cakes because they may not bake properly.

To set a Timed Cook or a Delayed Timed Cook, see the “Cook Time” section.

**COOK TIME**  
**Timed cooking**  
Cook Time allows the oven to be set to turn on at a certain time of day, cook for a set length of time, and/or shut off automatically.

To set a Timed Cook or a Delayed Timed Cook, see the “Cook Time” section.

**WARMING ZONE ON/OFF**  
**Warming zone**  
Press WARMING ZONE ON/OFF to select the warming element on the cooktop. Press START. Press WARMING ZONE ON/OFF to turn off the warming element.

**SELF CLEAN**  
**Self-Cleaning cycle**  
See the “Self-Cleaning Cycle” section.

**CONTROL LOCK**  
**Oven control lockout**  
1. Check that the ovens and timers are OFF.
2. Press and hold CONTROL LOCK for 3 seconds.
3. If enabled, a tone will sound and a lock will be displayed.
4. Repeat to unlock. Only the Clock, Light, and Kitchen Timer keypads will function with the controls locked. The cooktop functions are not affected by the oven control lockout.

### COOKTOP USE

#### Ceramic Glass
The surface cooking area may glow red when an element is ON. Some parts of the surface cooking area may not glow red when an element is ON. The glow will also randomly cycle off and back on again, even while on Hi, to keep the cooktop from extreme temperatures. This is normal operation.

It is normal for the surface of light-colored ceramic glass to appear to change color when surface cooking areas are hot. As the glass cools, it will return to its original color.

Clean the cooktop after each use to help avoid scratches, pitting, abrasions, and to condition the glass surface. affresh® Cooktop Cleaner and the Cooktop Scraper are also recommended for stubborn soils. Do not use abrasive cleaners, cleaning pads, or harsh chemicals for cleaning. The Cooktop Care Kit contains all of the items needed to clean and condition your ceramic glass cooktop. Refer to the “Range Care” section for additional information.

**IMPORTANT:** To avoid permanent damage to the cooktop surface and to make soils easier to remove, clean the cooktop after each use to remove all soils.

- Avoid storing jars or cans above the cooktop. Dropping a heavy or hard object onto the cooktop could crack the cooktop.
- To avoid damage to the cooktop, do not leave a hot lid on the cooktop. As the cooktop cools, air can become trapped between the lid and the cooktop and the ceramic glass could break when the lid is removed.
- For foods containing sugar in any form, clean up all spills and soils as soon as possible. Allow the cooktop to cool down slightly. Then, while wearing oven mitts, remove the spills using a scraper while the surface is still warm. If sugary spills are allowed to cool down, they can adhere to the cooktop and cause pitting and permanent marks.

#### Warning

**Fire Hazard**  
Turn off all controls when done cooking.  
Failure to do so can result in death or fire.

The control knobs can be set to anywhere between Hi and Lo. Push in and turn to setting.

**REMEMBER:** When range is in use or (on some models) during the Self-Cleaning cycle, the entire cooktop area may become hot.
To avoid scratches, do not slide cookware or bakeware across the cooktop. Aluminum or copper bottoms and rough finishes on cookware or bakeware could leave scratches or marks on the cooktop.

Do not cook popcorn in prepackaged aluminum containers on the cooktop. They could leave aluminum marks that cannot be removed completely.

To avoid damage to the cooktop, do not allow objects that could melt, such as plastic or aluminum foil, to touch any part of the entire cooktop.

To avoid damage to the cooktop, do not use the cooktop as a cutting board.

Use cookware about the same size as the surface cooking area. Cookware should not extend more than 1/2" (13 mm) outside the area.

Use flat-bottomed cookware for best heat conduction and energy efficiency. Cookware with rounded, warped, ribbed, or dented bottoms could cause uneven heating and poor cooking results.

Determine flatness by placing the straight edge of a ruler across the bottom of the cookware. While you rotate the ruler, no space or light should be visible between it and the cookware.

Cookware designed with slightly indented bottoms or small expansion channels can be used.

Make sure the bottoms of pots and pans are clean and dry before using them. Residue and water can leave deposits when heated.

To avoid damage to the cooktop, do not use plastic wrap to cover food because the plastic wrap may melt.

Cooktop On Indicator Light
The Cooktop On indicator light is located on the display panel. When any cooktop element on the console panel is turned on, the Cooktop On indicator light will glow.

Hot Surface Indicator Light
On ceramic glass models, the Hot surface indicator light is located on the display panel. The Hot Surface indicator light will glow as long as any surface cooking area is too hot to touch, even after the surface cooking area is turned off.

Dual Zone Cooking Element
The Dual Zone cooking element offers flexibility depending on the size of the cookware. Single size can be used in the same way as a regular element. The dual size combines both the single and outer element and is recommended for larger size cookware.

Warming Zone

WARNING
Food Poisoning Hazard
Do not let food sit in oven more than one hour before or after cooking.

Doing so can result in food poisoning or sickness.

Use the cooktop Warming Zone to keep cooked foods warm. One hour is the recommended maximum time to maintain food quality. Do not use it to heat cold foods. The Warming Zone can be used alone or when any of the other surface cooking areas are being used. The Warming Zone area will not glow red when cycling on. However, the Cooktop On indicator light will be displayed when the Warming Zone is in use.

To avoid damage to the cooktop, do not use plastic wrap to cover food because the plastic wrap may melt.

To avoid damage to the cooktop, do not use pot holders or oven mitts to remove food.

![Warming Zone Diagram](image)

To Use:
1. To turn on, press WARMING ZONE ON/OFF and then START.
2. To turn off, press WARMING ZONE ON/OFF.
**Cookware**

**IMPORTANT:** Do not leave empty cookware on a hot surface cooking area, element, or surface burner.

Ideal cookware should have a flat bottom, straight sides, and a well-fitting lid, and the material should be of medium-to-heavy thickness.

Rough finishes may scratch the cooktop or coils. Aluminum and copper may be used as a core or base in cookware. However, when used as a base, they can leave permanent marks on the surfaces.

Cookware material is a factor in how quickly and evenly heat is transferred, which affects cooking results. A nonstick finish has the same characteristics as its base material. For example, aluminum cookware with a nonstick finish will take on the properties of aluminum.

Cookware with nonstick surfaces should not be used under the broiler.

Check for flatness by placing the straight edge of a ruler across the bottom of the cookware. While you rotate the ruler, no space or light should be visible between it and the cookware.

Use flat-bottomed cookware for best cooking results and energy efficiency. The cookware should be about the same size as the cooking area outlined on the cooktop. Cookware should not extend more than 1/2" (13 mm) outside the area.

---

**Home Canning**

Canning can be performed on a glass smooth-top cooking surface or traditional coil element cooktop. When canning for long periods, alternate the use of surface cooking areas or elements between batches. This allows time for the most recently used areas to cool.

■ Center the canner on the largest surface cooking area or element. On electric cooktops, canners should not extend more than 1/2" (13 mm) beyond the surface cooking area or element.

■ Do not place canner on 2 surface cooking areas or elements at the same time.

■ On ceramic glass models, use only flat-bottomed canners to avoid damage to the cooktop and elements.

■ For more information, contact your local agricultural extension office or refer to published home canning guides. Companies that manufacture home canning products can also offer assistance.
OVEN USE

Odors and smoke are normal when the oven is used the first few times or when it is heavily soiled.

IMPORTANT: The health of some birds is extremely sensitive to the fumes given off. Exposure to the fumes may result in death to certain birds. Always move birds to another closed and well-ventilated room.

Electronic Oven Controls

Control Display
The display will flash when powered up or after a power loss. Press CANCEL to clear. When the oven is not in use, the time of day is displayed.

Tones
Tones are audible signals, indicating the following:

One Tone
- Valid keypad press
- Oven is preheated (long tone).
- Function has been entered.
- Reminder, repeating every 20 seconds after the end-of-cycle tones

Three Tones
- Invalid keypad press

Four Tones
- End of cycle

Fahrenheit and Celsius
The temperature is preset to Fahrenheit but can be changed to Celsius.

To change: Press and hold the Temp/Time “+” arrow keypad for 5 seconds until the oven display shows the current setting, for example “0°F CAL” or “00.”

Oven Temperature Control

IMPORTANT: Do not use a thermometer to measure oven temperature. Elements will cycle on and off as needed to provide consistent temperature, but they may run slightly hot or cool at any point in time due to this cycling. Most thermometers are slow to react to temperature change and will not provide an accurate reading due to this cycling.

The oven provides accurate temperatures; however, it may cook faster or slower than your previous oven, so the temperature can be adjusted to personalize it for your cooking needs. It can be changed in Fahrenheit or Celsius.

To Adjust Oven Temperature:
1. Press and hold the Temp/Time “-” keypad for 5 seconds until the oven display shows the current setting, for example “0°F CAL” or “00.”
2. Press the Temp/Time “+” or “-” keypad to increase or decrease the temperature in 5°F (3°C) amounts. The adjustment can be set between 30°F (18°C) and -30°F (-18°C).
3. Press START.

Keep Warm

WARNING

Food Poisoning Hazard
Do not let food sit in oven more than one hour before or after cooking.
Doing so can result in food poisoning or sickness.

IMPORTANT: Food must be at serving temperature before placing it in the warmed oven. Food may be held up to 1 hour; however, breads and casseroles may become too dry if left in the oven during the Keep Warm function. For best results, cover food.

The Keep Warm feature allows hot cooked foods to stay at serving temperature.

To Use:
1. Press KEEP WARM.
2. Press the Temp/Time “+” or “-” keypad to set the desired temperature. Press and hold to scroll quickly. The temperature will not scroll past the minimum or maximum allowable temperature.
   
   NOTE: The temperature may be changed at any time by pressing the Temp/Time “+” or “-” keypad to enter the desired temperature and then START.
3. Press START.
4. Place food in the oven.
5. Press CANCEL when finished.
6. Remove food from the oven.

To Cancel Keep Warm:
1. Press CANCEL.
2. Remove food from oven.
The Sabbath mode sets the oven to remain on in a Bake setting until turned off. A Timed Bake can also be set to keep the oven on for only part of the Sabbath. The Oven Control Lockout Feature (if present) will be disabled during the Sabbath. After the Sabbath mode is set, no tones will sound, the display will not show the temperature, the Kitchen Timer mode will be canceled (if active), and only the following keypads will function:

- “+” and “-” keypads
- Cancel

When the oven door is opened or closed, the oven light will not turn on or off and the heating elements will not turn on or off immediately.

When power is restored after a power failure, the oven will return to Sabbath mode and remain Sabbath compliant with the bake elements OFF until Cancel is pressed. Pressing Cancel at any time returns the oven to the normal cooking mode (not Sabbath compliant).

Pressing Cancel at any time returns the oven to the normal cooking mode (not Sabbath compliant). When the oven door is opened, the oven light will turn on and remain ON in the display. The oven is now in Sabbath mode and is Sabbath compliant. The On and Delay indicator lights will be displayed.

Performing these steps will cause the oven light to turn on when the oven door is opened, resulting in the oven being not Sabbath compliant.

If the oven has the Convection Bake feature, the oven light is controlled by a separate Oven Light switch on the console. If the oven light is ON when entering the Sabbath mode, it will remain ON for the entire time Sabbath mode is in use. If the light is OFF when entering Sabbath mode, it will remain OFF for the entire time Sabbath mode is in use. Opening the oven door or pressing Light will not affect the oven light once Sabbath mode has been entered.

If the oven has the Convection Bake feature, the oven light is controlled by a separate Oven Light switch on the console. If the oven light is ON when entering the Sabbath mode, it will remain ON for the entire time Sabbath mode is in use. For the oven light to be OFF during the Sabbath mode, the light bulb must be removed from the oven prior to entering the Sabbath mode. Not performing these steps will cause the oven light to turn on when the oven door is opened, resulting in the oven being not Sabbath compliant.

On the Holiday, the oven temperature can be changed once the oven is in Sabbath mode by pressing the “+” or “-” keypad. The oven temperature will change 25°F (14°C) each time the keypad is pressed. The display will not change and there will be no sounds during this adjustment.

To Set a Timed Bake Using Sabbath Mode (on some models):

1. Press BAKE.
2. Press the Temp/Time “+” or “-” keypad to enter a temperature other than the one displayed.
3. Press COOK TIME. The Cook Time indicator light will light up.
4. Press the Temp/Time “+” or “-” keypad to enter a cook time length.
5. Press START.
6. Press and hold KITCHEN TIMER for 5 seconds. “SAb” will flash in the display.
7. Press START within 5 seconds to enter Sabbath mode; otherwise, the entire cycle cancels out. “SAb” will stop flashing and remain ON in the display. The oven is now in Sabbath mode and is Sabbath compliant.

When the set cook time ends, the oven will shut off automatically and the indicator lights will turn off, indicating the end of the cycle. Pressing Cancel at any time returns the oven to the normal cooking mode (not Sabbath compliant).

To Set a Delayed Timed Bake Using Sabbath Mode (on some models):

1. Press BAKE.
2. Press the Temp/Time “+” or “-” keypad to enter a temperature other than the one displayed.
3. Press COOK TIME. The Cook Time indicator light will light up.
4. Press the Temp/Time “+” or “-” keypad to enter a cook time length.
5. Press START.
6. Press and hold KITCHEN TIMER for 5 seconds. “SAb” will flash in the display.
7. Press DELAY START. The Delay indicator light will light up.
8. Press the Temp/Time “+” or “-” keypad to enter a start time.
9. Press START.
10. Press and hold KITCHEN TIMER for 5 seconds. “SAb” will flash in the display.
11. Press START within 5 seconds to enter Sabbath mode; otherwise, the entire cycle cancels out. “SAb” will stop flashing and remain ON in the display.

When the start time is reached, the Bake, On, and Cook Time indicator lights will automatically turn on. When the set cook time ends, the oven will shut off automatically and the indicator lights will turn off, indicating the end of the cycle. Pressing Cancel at any time returns the oven to the normal cooking mode (not Sabbath compliant).

### Aluminum Foil

**IMPORTANT:** To avoid permanent damage to the oven bottom finish, do not line the oven bottom with any type of foil or liner. For best cooking results, do not cover entire oven rack with foil because air must be able to move freely.

**WARNING**

**Food Poisoning Hazard**

Do not let food sit in oven more than one hour before or after cooking.

Doing so can result in food poisoning or sickness.
Positioning Racks and Bakeware

IMPORTANT: To avoid permanent damage to the porcelain finish, do not place food or bakeware directly on the oven door or bottom.

Bakeware
To cook food evenly, hot air must be able to circulate. Allow 2" (5 cm) of space around bakeware and oven walls. Make sure that no bakeware piece is directly over another.

Racks
- Position racks before turning on the oven.
- Do not position racks with bakeware on them.
- Make sure racks are level.

To move a rack, pull it out to the stop position, raise the front edge, and then lift it out. Use the following illustration and chart as a guide for positioning racks.

Multiple Rack Cooking
2-rack: Use rack positions 2 and 4.

Baking Layer Cakes on 2 Racks
For best results when baking cakes on 2 racks, use rack positions 2 and 4. Place the cakes on the racks as shown.

Oven Vent
The oven vent releases hot air and moisture from the oven and should not be blocked or covered. Blocking or covering the vent will cause poor air circulation, affecting cooking and cleaning results. Do not set plastics, paper, or other items that could melt or burn near the oven vent.

Baking and Roasting

Preheating
When beginning a Bake cycle, the oven will begin preheating after Start is pressed. The oven will take approximately 12 to 15 minutes to reach 350°F (177°C) with all of the oven racks provided with your oven inside the oven cavity. Higher temperatures will take longer to preheat. The preheat cycle rapidly increases the oven temperature. The actual oven temperature will go above your set temperature to offset the heat lost when your oven door is opened to insert food. This ensures that when you place your food in the oven, the oven will begin at the proper temperature. Insert your food when the preheat tone sounds. Do not open the door during preheat before the tone sounds.

Oven Temperature
While in use, the oven elements will cycle on and off as needed to maintain a consistent temperature, but they may run slightly hot or cool at any point in time due to this cycling. Opening the oven door while in use will release the hot air and cool the oven which could impact the cooking time and performance. It is recommended to use the oven light to monitor cooking progress.

NOTE: On models with convection, the convection fan may run in the non-convection Bake mode to improve oven performance.

Temperature Management System
The Temperature Management System electronically regulates the oven heat levels during preheat and bake to maintain a precise temperature range for optimal cooking results. The bake and broil elements or burners cycle on and off in intervals. On convection range models, the fan will run while preheating and may be cycled on and off for short intervals during bake to provide the best results. This feature is automatically activated when the oven is in use.

Before baking and roasting, position racks according to the “Positioning Racks and Bakeware” section. When roasting, it is not necessary to wait for the oven preheat cycle to end before putting food in unless it is recommended in the recipe.
Broiling

When broiling, preheat the oven for 5 minutes before putting food in unless recommended otherwise in the recipe. Leave the desired oven door open 6” (15 cm) at the broil stop position to ensure proper broiling temperature. Position food on grid in a broiler pan, and then place it in the center of the oven rack.

NOTE: Odors and smoke are normal the first few times the oven is used or if the oven is heavily soiled. Changing the temperature when broiling allows more precise control when cooking. The lower the broil setting is, the slower the cooking. Thicker cuts and unevenly shaped pieces of meat, fish, and poultry may cook better at lower broil settings. Refer to the “Positioning Racks and Bakeware” section for more information. On lower settings, the broil element will cycle on and off to maintain the proper temperature.

For best results, use a broiler pan and grid. It is designed to drain juices and help avoid spatter and smoke.

If you would like to purchase a broiler pan, one may be ordered. See the “Accessories” section.

RANGE CARE

Self-Cleaning Cycle

**WARNING**

Burn Hazard
Do not touch the oven during the Self-Cleaning cycle.
Keep children away from oven during Self-Cleaning cycle.
Failure to follow these instructions can result in burns.

**IMPORTANT:** The health of some birds is extremely sensitive to the fumes given off during the Self-Cleaning cycle. Exposure to the fumes may result in death to certain birds. Always move birds to another closed and well-ventilated room.

Keep the kitchen well-ventilated during the Self-Cleaning cycle to help get rid of heat, odors, and smoke.

Do not block the oven vent(s) during the Self-Cleaning cycle. Air must be able to move freely. Depending on your model, see the “Oven Vent” or “Oven Vents” section.

Do not clean, rub, damage, or move the oven door gasket.

Prepare Range:
- Remove the broiler pan, grid, cookware and bakeware, all cooking utensils, oven racks, aluminum foil, and, on some models, the temperature probe from the oven.
- Use a damp cloth to clean inside door edge and the 1 1/2” (38 mm) area around the inside oven cavity frame, being certain not to move or bend the gasket.
- Wipe out any loose soil to reduce smoke and avoid damage. At high temperatures, foods react with porcelain. Staining, etching, pitting, or faint white spots can result. This will not affect cooking performance.
- Remove plastic items from the cooktop because they may melt.
- Remove all items from the storage drawer.

**How the Cycle Works**

**IMPORTANT:** The heating and cooling of porcelain on steel in the oven may result in discoloring, loss of gloss, hairline cracks, and popping sounds.

The Self-Cleaning cycle uses very high temperatures, burning soil to a powdery ash.

Once the oven has completely cooled, remove ash with a damp cloth. To avoid breaking the glass, do not apply a cool, damp cloth to the inner door glass before it has completely cooled.

The oven light is disabled during the Self-Cleaning cycle.

To stop the Self-Cleaning cycle at any time, press CANCEL. If the temperature is too high, the oven door will remain locked and “cool” and “locked” will be displayed.

When “locked” shows in the display, the door of the oven cannot be opened. To avoid damage to the door, do not force the door open when “locked” is displayed.

Before self-cleaning, make sure the door is completely closed or the door will not lock and the Self-Cleaning cycle will not begin.

**Electronic Oven Control with Adjustable Clean Time**

The Self-Cleaning cycle is time adjustable between 2 hours 30 minutes and 4 hours 30 minutes in 15-minute increments. Suggested clean times are 2 hours 30 minutes for light soil and 4 hours 30 minutes for heavy soil. The last 30 minutes of the cycle is for cooldown.

**To Self-Clean:**

1. Press SELF CLEAN.
2. Press the Temp/Time “+” or “-” keypad to enter the desired Self-Cleaning cycle time.
3. Press START.
   The oven door will automatically lock. The Door Locked and Clean indicator lights will be displayed. The time remaining will also be displayed.
4. When the Self-Cleaning cycle is complete and the oven cools, the Door Locked and Clean indicator lights will turn off.
5. When the oven is completely cooled, remove ash with a damp cloth.
   To exit the Self-Cleaning cycle before completed, press CANCEL. The door will unlock once the oven cools.
General Cleaning

IMPORTANT: Before cleaning, make sure all controls are OFF and the oven and cooktop are cool. Always follow label instructions on cleaning products. For additional information, you can visit our website at www.maytag.com. In Canada, visit our website at www.maytag.ca.
Soap, water, and a soft cloth or sponge are suggested first unless otherwise noted.

EXTERIOR PORCELAIN ENAMEL SURFACES (on some models)
Food spills containing acids, such as vinegar and tomato, should be cleaned as soon as the entire range is cool. These spills may affect the finish.

Cleaning Method:
- Glass cleaner, mild liquid cleaner, or nonabrasive scrubbing pad:
  Gently clean around the model/serial/rating plate because scrubbing may remove numbers.
- affresh® Kitchen and Appliance Cleaner Part Number W10355010 (not included):
  See the “Accessories” section for more information.

STAINLESS STEEL (on some models)
NOTE: To avoid damage to stainless steel surfaces, do not use soap-filled scouring pads, abrasive cleaners, Cooktop Cleaner, steel-wool pads, gritty washcloths, or abrasive paper towels. Damage may occur to stainless steel surfaces, even with one-time or limited use.

Cleaning Method:
Rub in direction of grain to avoid damaging.
- affresh® Stainless Steel Cleaner Part Number W10355016 (not included):
  See the “Accessories” section for more information.

METALLIC PAINT (on some models)
Do not use abrasive cleaners, cleaners with bleach, rust removers, ammonia, or sodium hydroxide (lye) because paint surface may stain.

CERAMIC GLASS
Cleaning Method:
To avoid damaging the cooktop, do not use steel wool, abrasive powder cleansers, chlorine bleach, rust remover, or ammonia.
1. Remove food/residue with the Cooktop Scraper.

For best results, use the Cooktop Scraper while the cooktop is still warm but not hot to the touch. It is recommended to wear an oven mitt while scraping the warm cooktop.
2. Apply a few dime-sized drops of affresh® Cooktop Cleaner to the affected areas.
- Rub affresh® Cooktop Cleaner onto the cooktop surface with the blue Cooktop Cleaning Pad. Some pressure is needed to remove stubborn stains.
- Allow the cleaner to dry to a white haze before proceeding to Step 3.
3. Polish with a clean, dry cloth or a clean, dry paper towel.
- Repeat steps 1 through 3 as necessary for stubborn or burned-on stains.

The Complete Cooktop Cleaner Kit is available for order and includes the following:
- Cooktop Scraper
- affresh® Cooktop Cleaner
- Blue Cooktop Cleaning Pads
See the “Accessories” section for part numbers and information on ordering.

COOKTOP CONTROLS
To avoid damage to the cooktop controls, do not use steel wool, abrasive cleaners, or oven cleaner.
To avoid damage, do not soak knobs. When replacing knobs, make sure knobs are in the Off position.
On some models, do not remove seals under knobs.

Cleaning Method:
- Soap and water:
  Pull knobs straight away from control panel to remove.

CONTROL PANEL AND OVEN DOOR EXTERIOR
To avoid damage to the control panel, do not use abrasive cleaners, steel-wool pads, gritty washcloths, or abrasive paper towels.

Cleaning Method:
- Glass cleaner and soft cloth or sponge:
  Apply glass cleaner to soft cloth or sponge, not directly on panel.
- affresh® Kitchen and Appliance Cleaner Part Number W10355010 (not included):
  See the “Accessories” section for more information.
OVEN RACKS
Cleaning Method:
■ Steel-wool pad
■ For racks that have discolored and are harder to slide, a light coating of vegetable oil applied to the rack guides will help them slide.

STORAGE DRAWER
Check that storage drawer is cool and empty before cleaning.
Cleaning Method:
■ Mild detergent

OVEN CAVITY
Do not use oven cleaners.
Food spills should be cleaned when oven cools. At high temperatures, foods react with porcelain. Staining, etching, pitting, or faint white spots can result.
Cleaning Method:
■ Clean cycle: See the “Self-Cleaning Cycle” section.

Oven Light
The oven light is a standard 40-watt appliance bulb. Before replacing, make sure the oven and cooktop are cool and the control knobs are in the Off position.

To Replace:
1. Unplug range or disconnect power.
2. Turn the glass bulb cover in the back of the oven counterclockwise to remove.
3. Turn bulb counterclockwise to remove from socket.
4. Replace bulb and then bulb cover by turning clockwise.
5. Plug in range or reconnect power.
